Epic: **As a** student, **I want** to know if the weather is good **so that** I can decide whether it is safe for me to parachute

User Stories:
As a user, I want to know if the weather conditions are safe for me to go parachuting before I leave, so that I can prevent wasting a journey

As a user, I want to be able to parachute in more dangerous conditions if I am at the appropriate skill level, so that I can get better at parachuting

As a user, I want to be able to contact the parachuting school, so that I can double check if it is safe for me to parachute or not

As an unskilled/less skilled user, I want simple, easy to understand icons that explain the weather conditions at a glance, so that I don't need to figure out if the weather conditions are safe by myself

As an owner, I want to reduce the number of incoming contacts, so that I can respond to the most important ones

As an owner, I want to show users what determines each skill level, so that I can reduce the number of incoming contacts and potential safety hazards

As an owner, I want to verify user's skill levels in parachuting, so that I can prevent letting unskilled users from parachuting in conditions outside their skill level

Old User Stories

As a user, I want to be able to specify my level so that I get the information to suit my needs.

As an owner, I want to be able to know if the users are the level they specify, so that I can prevent health and safety hazards

As a student, I want to see a signal to show if the weather is suitable, so that I can see if it is safe to attend the school.

As a novice, I want to my information to be tailored to suit my needs, so that I can get into parachuting without dealing with overwhelming weather conditions

As a novice I want a simple indicator so that I can decide whether to jump or not.

As a veteran, I want to have detailed information about weather conditions so that I can prepare for different jumping scenarios

Much older:
As a user I am presented with the date, an icon representation of weather conditions, the temperature, humidity, wind speed, the UV index. As a User I am then presented with a

colour that indicates whether the conditions are favourable, moderate or severe to parachute.
